**Lead in turmeric in Bangladesh:** We continue to engage with the Bangladesh Food Safety Authority following up on our work published in 2019 that linked elevated lead levels among
residents of rural Bangladesh to consumption of turmeric that was adulterated with lead chromate. Three days following our publications in September 2019 and a coordinated press release the Bangladesh Food Safety Authority banned the use of any colorant in spices. Prior to these public pronouncements, we found that 47% of turmeric samples from the major wholesale market in Dhaka were positive for lead. In a follow-up evaluation 12 months after the ban went into effect, only 5% of turmeric samples in the wholesale market had detectable lead.

- **COVID-19 Pandemic response.** I was interviewed by various news sources discussing public health strategies to reduce the transmission of COVID-19 including a 20 minute interview on the most popular news-show in India (TimesNow Newshour) and an interview on Bangladesh national television.

- Special Summer Seminar (SCPKU)—postponed due to COVID19
- I had planned an extra course that was to be taught this past summer, 2020. It was to be a new special graduate seminar for Stanford students taught in China. The title of the course was: “Inside a Company in China.” This seminar was designed to allow students an in depth, firsthand understanding of how a company operates in China by incorporating fieldwork along with classroom education about China’s political economy. It would have examined how a company secures and manages supply chains, labor, and markets, as well as firm interactions with local governments and communities. As a window on corporate operations in diverse parts of China, I would have taken students inside several plants belonging to one company, part of their vast network throughout China, to do fieldwork.

We planned to begin the seminar in Beijing at the Stanford Center at Peking University (SCPKU), with approximately a week of classroom work to ensure that students had sufficient background and were prepared to do fieldwork, before undertaking two weeks of site visits and interviews. We would have done fieldwork in four different sites in China over a two-week period. We would have begun and ended our fieldwork with discussions at company headquarters in Shanghai. In between we planned to have students conduct research in three diverse sites to understand the challenges that companies face as they adapt to local conditions. This would have been possible with the cooperation of a multinational company with hundreds of factories and offices in China.

Unfortunately, because of COVID-19 the course had to be postponed. Tentatively, it is scheduled for this coming summer, 2021, conditions permitting.
